It lets you shoot RAW files in any mode — including 14-bit RAW — and then quickly convert them into JPGs for any camera format, including an iPhone. As soon as you take a photo, it is quickly converted into one of the mostly common formats such as jpeg, tiff or psd. All you have to do is name and tag the shot. Additions to the software include Lens Corrections, a significant update to the Camera Raw module and a host of new editing extensions such as the Timeline, the Swatch Panel, the Golden Gate Bridge and more. Also, Layer Styles is now much easier to use with, and a new recomposition tool adds 2-layer and 3-layer support to the now exposed Live Filter feature. And the Spot Healing Brush has been improved to fill grids and add retouching anchors. Meanwhile, an Adjustment Brush has been added to the Adjustments panel, and the Lens Correction panel makes it easier to use multiple lenses, both physical and virtual, on a single image.
