This is the image of my the unique
towÂ .The Next Mobile Money Revolution A
new paper from the World Bank and the
World Economic Forum highlights the
potential and scope of Africa's mobile-
money services. The report notes that when
the first text messages were launched in
1998, they were "an anachronism in
Africa," yet today, in more than half of sub-
Saharan Africa, the most recent mobile-
money users are above the age of 40. The
report, "Mobile Money in Africa: Opportunity
and Incentives," suggests how many more
young Africans could benefit if the right
policies are put in place. It predicts that by
2017 more than seven million new users
will sign up for mobile money, according to

a scenario where the Government of Uganda achieves the goal of setting up a financial inclusion program across the nation. The report focuses on three factors:

Data Using the cellphone network is a practical way to launch mobile money services, because this may mean a better reach to certain groups of the population.

But like any electronic system, mobile money requires data, and the right amount and quality of data to support this growing market segment is increasingly difficult to come by. To counter this challenge, a large-scale project called IM-ME is based in Uganda, with partners in Kenya, Ghana, Zambia and Senegal to provide affordable and high-quality data connectivity, which

increases the value of mobile money for consumers. It builds on a successful Ghana pilot and includes mobile-money service provider M-Pesa, mobile operators and mobile devices companies to ensure a future of growth. A different challenge arises in slow-wired areas or in remote areas that have no electricity or which are sparsely populated. In these areas, people may still use mobile money, but it takes longer for transactions to be processed and deposited. In some areas, there is no infrastructure to support 3G or 4G networks. To address this challenge, mobile money service providers have started offering reloadable pre-paid cards to make transactions more affordable. Incentives It

is important to make the services and pre-paid cards for mobile money accessible to a wide segment of people, whether they are full-time formal workers or self-employed or pensioners who cannot take time off.
