If you're the kind of person who likes to give their computer the best case and keyboard from the corporate world, with the same look and feel that everyone from sales to product managers to designers will be using, this is the group for you. At the other end are those who opt for a quieter environment, such as parents with kids or people that don't use macOS very much as their main computer, and who want to save money on their case and keyboard, or who are on Windows and don't want to commit to spending as much as the Mac Pro costs to use on the Mac. The Apple MacBook Pro is an extremely popular option for Mac users who don't feel like spending \$2,500 to \$3,000 on the latest machines. If you are one of these users, this largely is not the group for you. If you've got money to spend, though, we recommend you do, because this is often the one MacBook you dream about owning.

Although the standard Photoshop featureset is quite complex, Adobe Jasc Software announced a series of "Inkling" plugins to help remedy that on Wednesday. In Inkling, key features include the ability to add a page number to documents, a reorganization feature that automatically lays markers across layers, and improved text-based tools. The software is currently in beta testing for macOS, but customers who preorder now will get early access. There's also a new free update to Photoshop CC (one of

the most popular paid downloads). The update enables the use of new file-management strategies such as a recent and easily accessed context menu and the ability to open multiple Photoshop panels simultaneously. The updates also improve panel settings and performance and improve the stability of the app (and its handling of large files). This holiday season, Adobe is set to release a new version of Adobe Photoshop CC, which implies that the company plans to release a new version of its Elements line at some point this year, too. Regardless, the software moves at its own pace—no matter if that means a new version of Photoshop or Elements every six months. With the release of Photoshop CC, users add a new feature to share for review or to provide comments and feedback and gain a deeper understanding of their images. Photoshop CC beta now supports the OneDrive cloud for sharing and collaboration in order to make it possible for all files to be stored in the cloud. You can opt in to the beta by visiting the Photoshop menu and selecting Preferences > Upgrade to Photoshop CC and Go.
